

Superseded by PR 102

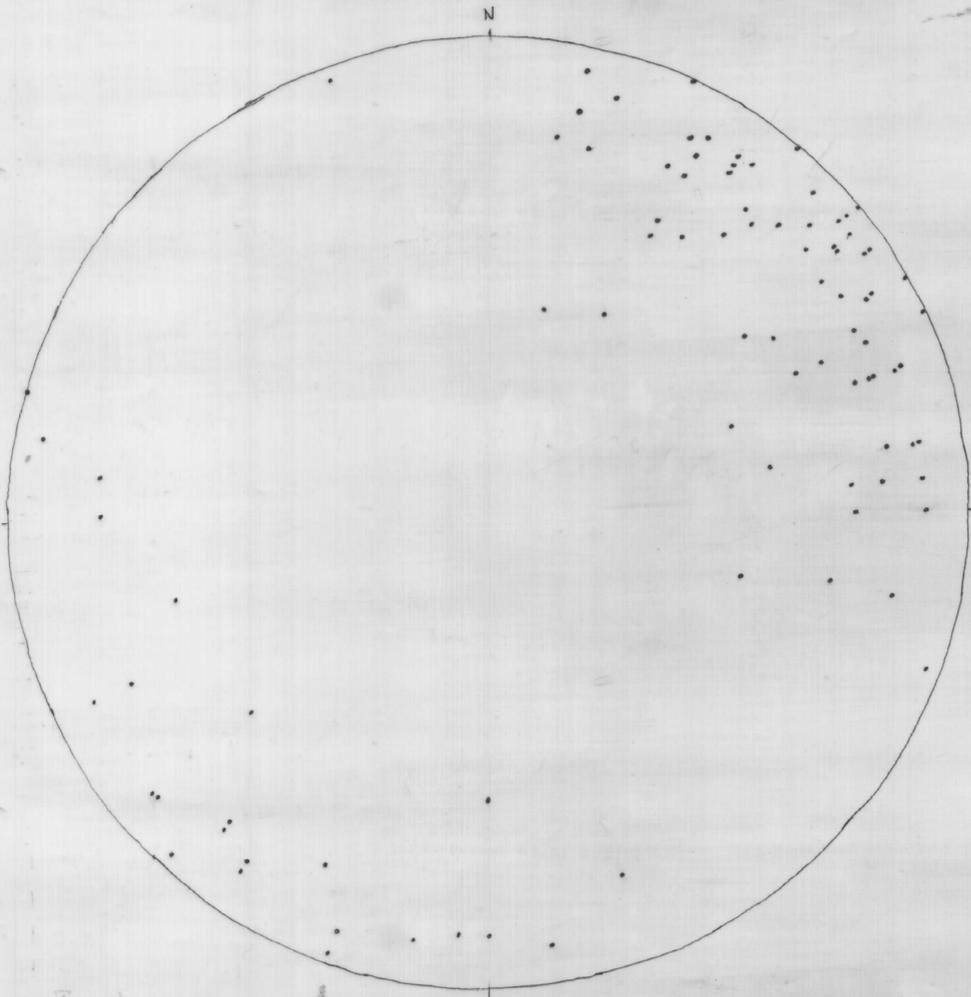

Figure 5. Lower hemisphere equal area plot of 101 minor  $F_2$  isoclinal and subisoclinal folds.

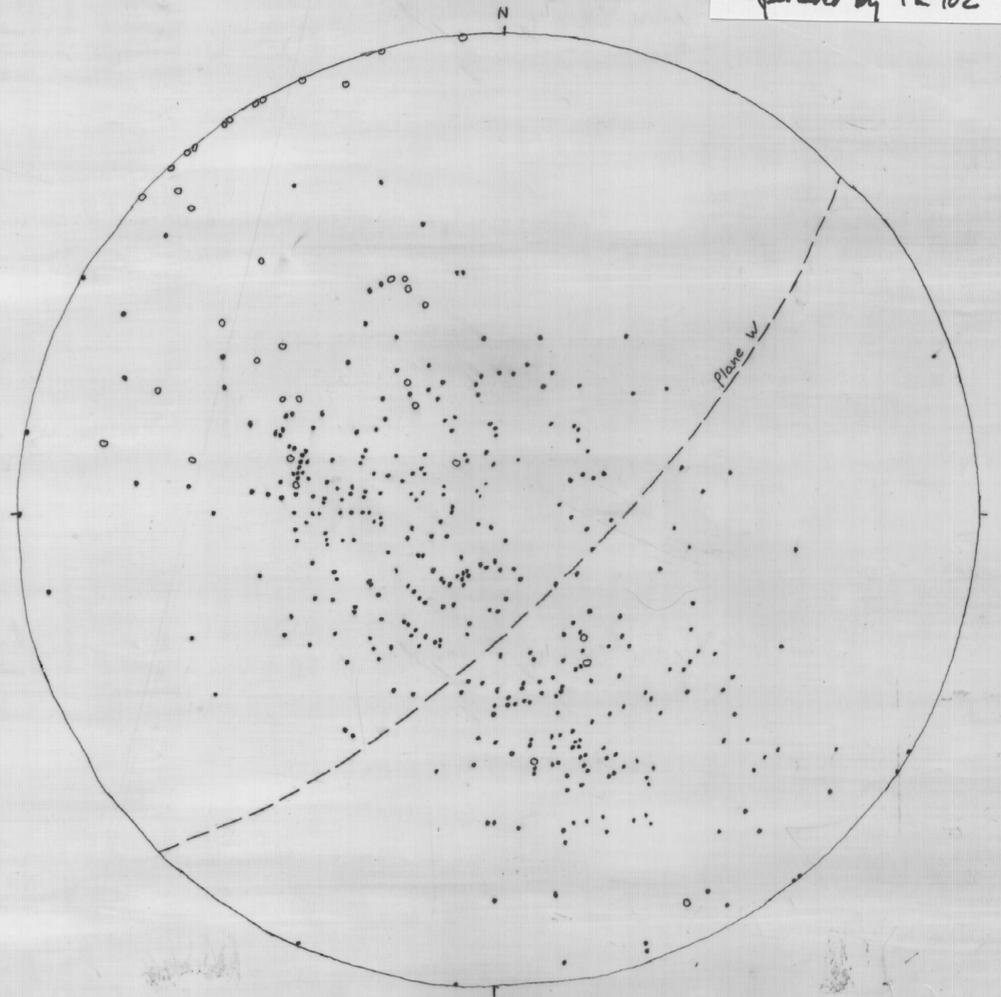

Figure 6. Lower hemisphere equal-area plot of 251 poles to  $S_2$  foliation. Solid circles from upper limb of Middle Fork Anticline, open circles from lower limb (overturned).  $S_2$  foliation is generally parallel to bedding and shows deflection around a large  $F_2$  or younger fold, whose approximate axial surface is marked by Plane W.

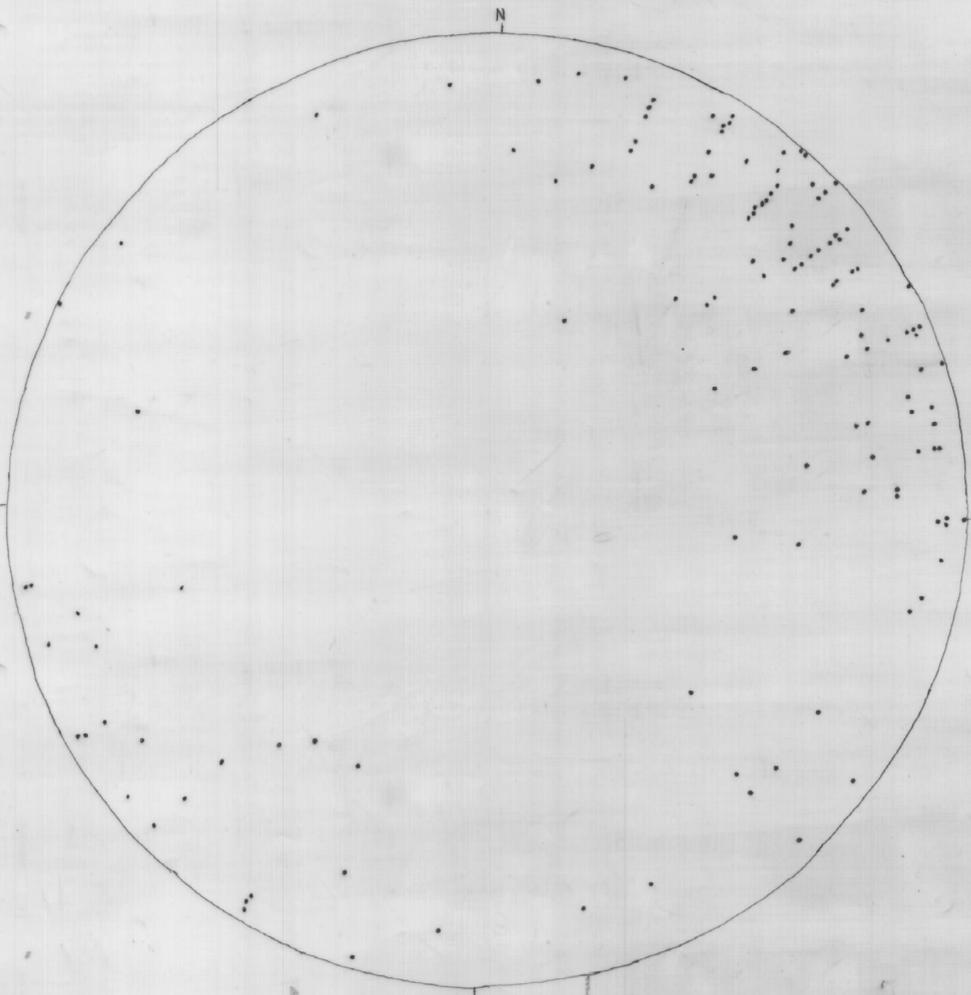

Figure 7. Lower hemisphere equal-area plot of 134 minor  $F_2$  kink folds.

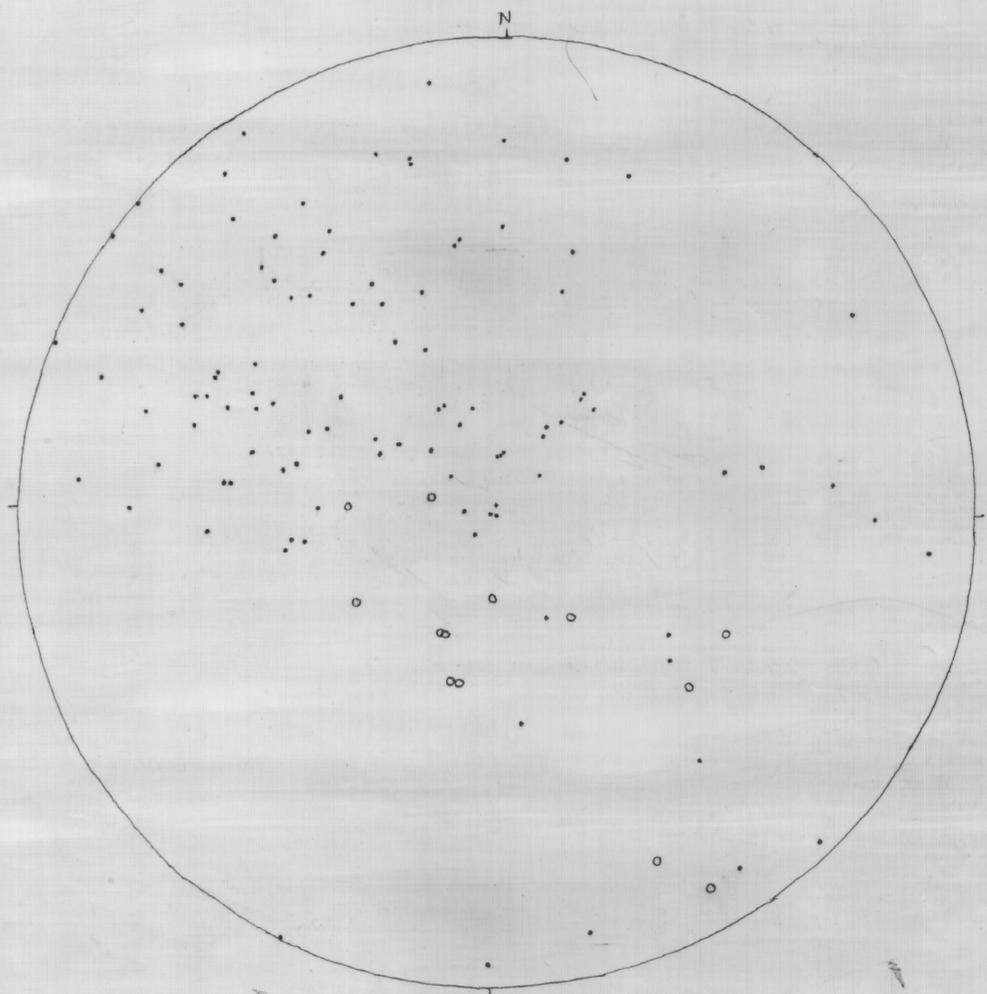

Figure 8. Lower hemisphere equal-area plot of 116 poles to  $S_2$  slip cleavage. Solid circles from upper limb of Middle Fork Anticline and open circles from lower limb.
