MINERAL INVESTIGATIONS
RESOURCE MAP MR-84

EXPLANATION

Area containing one or more lode gold or silver deposits

Circular areas are 10 kilometers in diameter; numbers are keyed to the accompanying reference list. About 9 million troy ounces of gold and about 17 million troy ounces of silver have been produced from Alaskan lode mines. Nearly three-quarters of the gold came from mines near Juneau (locality 350) as did seven million ounces of silver. One from the Kennecott mines (locality 267) yielded 9 million ounces of silver as well as about 1.2 billion pounds of copper
